Concept:
My project concept is to redesign an outdated local small business site, a soup vendor called
'Got Soup?'. http://www.gotsoupseattle.com/
Their current site is a compact one-page, but the navigation layout is somewhat confusing,
leading you in a circle around the main window where content is displayed. On mobile their
layout is very small and difficult to read. They have a cute charm, so I want to make sure to
preserve that small-business feel while making a more user-friendly and size-responsive layout.
I'll be creating a one-page scrolling website with sections for their delivery and market sales
options, an about us section, and contact information. Their current ordering method is to send
an email to the owner with your order and information, so I'm going to incorporate an order form
on the site. They sell products at several Seattle Farmer's markets so I will also include a Leaflet
map of locations with pop-up markers for days/hours.
Most written content will be pulled from the original business site, images will be collected from
pixabay public domain images, colors will match the brand's current logo in more muted
pleasing shades.

Frameworks:
jQuery
Bootstrap - mobile responsive, glyphicons
Leaflet - map

Colors:
Yellow: #F9BA32
Red: #AA382E
Green: #769346
Brown: #915E10
White: #FFFFFF
Black: #000000

Potential Glyphicons:
Grain: glyphicon glyphicon-grain
Apple: glyphicon glyphicon-apple
Time: glyphicon glyphicon-time
Flash: glyphicon glyphicon-flash
Leaf: glyphicon glyphicon-leaf
Calendar: glyphicon glyphicon-calendar
Heart: glyphicon glyphicon-heart-empty
or enable https://material.io/icons/ ?
